

## *Enterprise Solutions for Small Business*

**Applied IP is a leading provider of business technology solutions in the San Francisco Bay Area, offering Professional and Managed Services for small and medium businesses.**

We understand that the smaller your business, the more pressure you face to implement high-quality and cost-effective technology. So we work with small and medium businesses

to provide enterprise-quality solutions customized for your particular needs. We collaborate closely with customers to understand unique technical challenges, and come up with solutions to fit your budget.

***“Applied IP: offering small and medium organizations the enterprise-quality solutions and services you deserve.”***

We offer a complete suite of services for IP Surveillance, Security, Wireless and VoIP networking, as well as ongoing servicing customized for your businesses. We also offer a selection of equipment leases to accommodate the requirements of promising early-stage companies, allowing you access to the equipment you need at a price you can afford.

**The advanced technology solutions offered by Applied IP include:**

**IP Surveillance**

A leader in the growing field of IP surveillance and video monitoring, Applied IP is authorized to resell both EWatch and Sony IP surveillance systems. We've implemented and maintain IP surveillance and video monitoring systems for Bay Area universities and schools, as well as for local security and police forces. We were one of the first companies in the Bay Area to install covert surveillance equipment to make IP surveillance even more effective. ←

**Wireless**

Applied IP can implement mesh and wireless networks for voice and data communication on university campuses and in corporate environments. These networks offer a robust, cost-efficient, and straightforward means of establishing a redundant network. As an authorized Cisco reseller, we are on the leading edge of the rapidly evolving market for wireless technology. ←

**VoIP**

Applied IP helps small and medium businesses install Voice over Internet Protocol networks for voice applications such as telephony, voice, instant messaging, and teleconferencing. A well-conceived VoIP network allows customers to simplify their networks and improve IP telephony. ←

**Security**

Applied IP offers a complete suite of firewall and networking security solutions for businesses, and is an authorized reseller of Cisco Security Solutions. We also offer security auditing via penetration tests, to help you identify and resolve any security vulnerabilities. ←

**Support**

Applied IP can provide ongoing servicing of the systems we implement. Our support services in the San Francisco Bay Area are characterized by a level of on-site service and responsiveness that national providers simply can't provide. ←
